## **240-1503 Mack FXL16 Front Axle, 16,000 Lb. (240AA4)**

**Affects:** Anthem & Pinnacle

**Related:** Front Springs (244), Front Brakes (241), Front Brake Drums (BF-)

**Updated:** January 30, 2018

---

### **Forged I-beam Construction**

Mack steer axles feature a forged I-beam that's the strongest, and the lightest, on the road today. More durability and carrying capacity at a lighter component weight will help keep costs down.

### **Keeping You in Control and With Less Maintenance**

Mack steer axles are engineered for better handling. Thanks to the precise assembly, no end-play adjustment is needed. Mack steer axles are not only stronger and lighter, but designed to last longer with less maintenance.

### **Heavy Duty Kingpins**

The Mack steer axle features a heavy-duty king pin with a tapered design. For a driver, that means improved handling, with better control and stability, and a smooth and firm ride, even with tight wheel cuts. This king pin also delivers enhanced bearing clearance and durability. And since the knuckle is solidly attached to the axle beam, no adjustment is needed.

### **Specifications:**

KPI: 69.92"

Spring Type: Progressive Taperleaf

Capacity: 16,000 Pounds

Axle Drop: 3.5"

Flange Width: 3.5"

Web: .75"

Spindle: Straight with Unitized Bearings
